Chloroprene rubber, CR

Recommended thickness of the material: $\geq 0,5$ mm

Nitrile rubber, NBR

Recommended thickness of the material: $\geq 0,4$ mm

The selection of the suitable gloves does not only depend on the material, but also on further marks of quality and varies from manufacturer to manufacturer. As the product is a preparation of several substances, the resistance of the glove material can not be calculated in advance and has therefore to be checked prior to the application.

· Penetration time of glove materialpenetration time ≥ 480 min.Value for the permeation: Level ≥ 6

The determined penetration times according to EN 374 part III are not performed under practical conditions. Therefore a maximum wearing time, which corresponds to 50% of the penetration time, is recommended.

The exact break trough time has to be found out by the manufacturer of the protective gloves and has to be observed.
